

## EARLY CASE ASSESSMENT AND ESI PROCESSING

### eDiscovery can be the most expensive part of modern litigation.

So why not get involved early in the process to make it more efficient, accurate, and less costly? Omnivere blends together the people, process and technology to make early data assessment and data processing work effectively for our clients. We combine cutting-edge technology, a professional team of legal technologists, and refined workflows and processes that help case teams get control of their legal discovery when it counts the most—in the beginning.

#### OMNIVERE KEPS

Our proprietary KEPS engine ingests and processes vast amounts of information; searches and culls it rapidly; provides the information needed for review; and produces it in the required format within the mandated timeline — while keeping your company's sensitive information completely secure. Production through KEPS is 100% accurate, 100% of the time.

#### OMNIVERE DIRECT

Omnivere Direct is a client-facing early data assessment and culling solution that drives efficiency through proven technology and processes. It provides clients with an early overview of their dataset and the ability to drastically reduce the volume of data in a responsible, transparent and defensible manner. This translates into cost and time savings throughout the entire eDiscovery process.

### Omnivere early case assessment and data processing services provide clients with the benefits of:

**Drastic reduction in datasets promoted to review, resulting in cost savings**

**Early overview of dataset** enabling case teams to make informed decisions

**Decreased risks with defensible and accurate processes and technology**

**Speed - Get to review more quickly, saving time and money.**

## DIRECT: Key Advantages and Benefits

### DIRECT ACCESS

Clients access and work directly with their data through our web-based user interface, ensuring a more efficient and accurate process.

### EARLY OVERVIEW

Our comprehensive reporting and search functionality allows for optimized early overview of dataset, enhanced review strategy and budget planning. It also provides heightened visibility into the efficacy of data collection efforts and search terms efficiency.

### COST REDUCTION

is achieved through culling irrelevant documents and optimizing search terms in an easy, defensible and transparent manner.

We handle datasets containing more than ten

**(10) million documents,**

successfully reducing datasets by ninety-seven percent,

**97%**

and saving clients

**hundreds of thousands**

of dollars in review costs.

### SECURITY & PRIVACY

Given the sensitive nature of data being accessed and stored in the hosted review space, security and privacy is paramount.

### ISO CERTIFIED AND SECURED

The Omnivere Project Management Group is trained, certified and works within an ISO/IEC 27001 (2013) certified information security management system. This certification applies to the information security management system (ISMS) supporting all systems, processes, procedures and technology involved in e-discovery data processing, online document review with Relativity, consulting, staffing and forensic data collection, and in accordance with the statement of applicability version 3.1, October 2017. This credible third-party authentication under which the Omnivere Project Management Group performs their services represents an ongoing commitment to keeping our clients' data secure and confidential.
